Assessing Science Practices

Why Transform Labs?

Need Science Practices

"[Typical courses in t]he sciences ... are **not** made the means of cultivating the *observing powers*, stimulating *inquiry*, exercising the judgment in *weighing evidence*, nor of forming independent habits of thought." [Emphasis mine]

Steven F. Wolf (wolfs150ecu.edu)

Why Transform Labs?

Meaningful Science

"To support students' meaningful learning in science, [practices and content] need to be integrated into standards, curriculum, instruction, and **assessment**."

NRC framework for science education (2012) (emphasis mine)

NRC (2012)

Science Practice Focused Lab curriculum

Piloted Spring 2018

Piloted Fall 2018

- ∢ 🗗 ▶

M.J. Ford, Science Education 99, 1041 (2015).

Empirical practices:

- EP1 Locate information relevant to a scientific problem.
- EP2 Construct a relevant/appropriate scientific question for a given problem.
- EP3 Design an experiment to test a scientific question.
- EP4 Apply (or know when to apply) appropriate analytical methods to examine a scientific problem.
- EP5 Appraise an experimental design to identify elements and limitations and how they impact scientific findings/conclusions.
- EP6 Troubleshoot technical issues.
- EP7 Evaluate evidence and critique experimental designs.
- EP8 Interpret basic statistics (e.g., average and SD).

What science practices?

M.J. Ford, Science Education 99, 1041 (2015).

Representative practices:

- RP1 Generate a hypothesis or make a prediction based on a scientific model.
- RP2 Construct an argument based on evidence.
- RP3 Identify additional information needed to support an argument.
- RP4 Provide alternative explanations for results that may have many causes.
- RP5 Integrate and apply knowledge across sub-disciplines.
- RP6 Represent data in a visual form.
- RP7 Interpret visual representations of data.
- RP8 Construct a Data table.
- RP9 Data Analysis.

Practical design – Physics I

Prompt

You notice that for a given rotation radius R, the stopper (mass m) travels faster as the hanging mass M increases. You want to determine the relationship between hanging mass (M) and period (T) for a given radius (R).

Students turn in a report that includes:

- An experimental procedure
- A data table
- Their claim
- A (transformed) plot of T vs. M
- An argument

Image: A matrix and a matrix

- This practical is to be given throughout the entire grant period.
- Crafted a detailed rubric.
- Exams are turned in online and sent through SafeAssign/TurnltIn.

Faculty were concerned that the exam would get out/students would cheat. That informed our initial analysis.

Preliminary Results: Across semesters

A ID > A A P > A

Preliminary Results: Across days (Fall 2018)

10 / 16

A D M A A A A M M

Preliminary Results: Across days (Spring 2019)

Preliminary Results: Across graders (Fall 2018)

Preliminary Results: Across graders (Spring 2019)

Conclusions/Future Directions

- We have developed a practical with face validity
- We are able to use it on multiple days and across semesters without issues with cheating
- We are working on calibrating graders
- We are working on establishing construct validity
